

# SWITCH-2 TWIN CYLINDERS GAS SYSTEM

## SWITCH-2 Twin Cylinder Gas System

- For Butane and Propane
- Simple to install
- Fits all gas cylinders

Prod.Code 01-5050

**GASLOW**

### Multi-Combination Bottled Gas System

Propane - Switch to Butane  
 Butane - Switch to Camping Gas  
 Camping Gas - Switch to Propane  
 Any combination is possible

**Simplicity itself** - just install SWITCH-2 into the low pressure side of the gas system after your two regulators.

**Changeover** - at the turn of a switch, without interrupting your gasflow.

**Bottle Disconnection** - SWITCH-2 allows you to remove your empty gas bottle without the worry of gas leaks

#### Installation

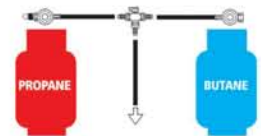

SWITCH-2 allows any two regulators (Propane and/or Butane) to be connected to your gas system

1. Position SWITCH-2 in the desired location as shown above.
2. Turn the switch to the middle and fix the Mounting Bracket in place.
3. Connect the hose feeding your appliances to the outlet nozzle and secure with the hose clip supplied.
4. Connect the two regulators to the inlet nozzles and secure with the hose clips supplied.
5. Check the inlet and outlet nuts of SWITCH-2 are secure and gas tight.

#### Operation

SWITCH-2 can draw from only ONE GAS BOTTLE AT A TIME.

1. Decide which gas bottle is to be used and turn the Arrow Switch to that bottle.
2. Turn on the gas supply at that bottle.
3. Changeover is simple. Turn on the gas at the SECOND bottle, then turn the Arrow Switch to that bottle
4. Once turned OFF the empty bottle can be removed without the worry of gas escape.

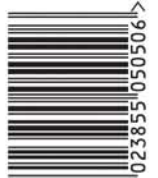

**IMPORTANT:** When changing over gas bottles the gas system must not be left unattended with only one bottle connected when gas is turned ON at the bottle.

#### General Safety Precautions

Gas bottle storage areas must be well ventilated. Use no naked flames, cigarettes, matches etc. in the vicinity when connecting, disconnecting OR WHEN OPERATING THE GAS SUPPLY.

Should there be any queries, please contact your local dealer or ourselves direct.
